

# BLUE CONTROL UV ++

1.60 UV ++ 1.67 UV ++

**No lens material cuts out this much Ultra Violet**

The new era in Ultra Violet lens Protection has arrived in Australia. Our UV++ lens material is available in 1.6 and 1.67 index. Clear, tinted, Hard coated or Multicoated options available. UV++ eliminates all wavelengths of light up to 420 nm, the material is very impressive, if you would like to view a demonstration of the point of sale kit, contact Justin via [juzvision@bigpond.com](mailto:juzvision@bigpond.com).

**Work. Play. Protection.**

This lens is best suited for office workers as it blocks Ultra Violet wave lengths up into the Blue light spectrum. When tinted, it is a great alternative to be used as a sunglass lens. It will block all harmful UV rays. The 1.6 UV++ can be tinted any colour.
